According to our (Global Info Research) latest study, the global Enterprise Semantic Search Software market size was valued at USD 105 million in 2023 and is forecast to a readjusted size of USD 189.5 million by 2030 with a CAGR of 8.8% during review period.

Enterprise Semantic Search Software is a type of software that enables enterprises to use semantics to locate and retrieve data from within their internal networks. Semantics is the study of meaning and relationships between words, concepts, and entities. Semantic search software can understand the context and intent of a query, rather than just matching keywords, and provide more relevant and accurate results. For example, if a user searches for “apple”, semantic search software can distinguish between the fruit and the company based on the user’s profile, preferences, and previous searches.

The industry trend of Enterprise Semantic Search Software is expected to be positive and growing in the future. The report attributes this growth to the increasing use of IoT technology in enterprise mobility solutions, the digital transformation in Asia Pacific countries, the rising demand for data-driven insights, and the need for efficient information retrieval and utilization. Additionally, the emergence of new innovative software that leverages artificial intelligence, natural language processing, machine learning, and linked data to provide smarter and faster semantic search is likely to augment the market growth.
