Abstracts

The global Entrance Card market size is expected to reach \$ 1851 million by 2032, rising at a market growth of 6.2% CAGR during the forecast period (2026-2032).

Entrance cards are physical identity credentials used for access control in physical spaces. They typically encapsulate chips, antennas, magnetic strips, or visually printed information using PVC, PETG, polycarbonate, or environmentally friendly paper-based materials. They communicate with access control systems via card readers to complete identity verification, authorization, and door opening. Their main forms include 125 kHz low-frequency short-range cards, 13.56 MHz high-frequency contactless IC cards, MIFARE-type smart cards, DESFire-type high-security cards, magnetic stripe hotel room cards, and dual-technology composite cards. ISO/IEC 7810 specifies the physical characteristics of identification cards, ISO/IEC 14443 covers the communication framework for short-range contactless IC cards, and NFC Forum Type 4 tags are also compatible with the ISO/IEC 14443 standard series. From a market statistics perspective, access cards differ from access control systems. Access cards are portable credentials issued to employees, guests, students, visitors, owners, or government personnel. Their value is primarily determined by chip security level, storage capacity, encryption algorithm, card material, personalized printing, encoding services, and system compatibility. Low-end UID cards and magnetic stripe access cards are priced lower, while high-security DESFire, SECOS, PIV, PKI, or multi-application smart cards are significantly more expensive. GlobalPlatform's definition of Secure Element emphasizes its use as tamper-proof security hardware in smart card and other forms. High-security access cards from manufacturers like HID and NXP already employ features such as AES, random UID, secure channels, and proximity verification. Global Entrance Card production is projected to reach approximately 2.5 billion units by 2025, with an average price of approximately US\$0.47 per unit and a

gross margin of approximately 22%-38%.

Entrance Cards Remain One Of The Lowest-Cost, Most Mature And Most Interoperable Physical Identity Credentials In Global Access Control. Although Mobile Credentials And Biometrics Are Growing Rapidly, Physical Cards Still Offer Simple Issuance, Low Training Cost, Offline Usability, Cross-System Compatibility And Attractive Bulk Procurement Economics Across Hotels, Schools, Offices, Factories, Hospitals, Government Campuses And Multi-Tenant Properties. In Building Retrofit, Hotel RFID Key Card Replacement, Multi-Site Enterprise Access Management, Campus One-Card Systems And Government Security Upgrades, Migration From Low-Frequency Cards To High-Frequency Encrypted Cards, And From Basic MIFARE Classic To DESFire EV3 Or Equivalent High-Security Credentials, Is The Main Value-Uplift Driver.

The Core Challenge Is Not Demand Disappearance But Product Segmentation. Commodity PVC Cards, UID Cards And Standard Hotel Key Cards Are Highly Standardized And Face Strong Price Competition, While High-Security Smart Cards Depend On Chip Availability, Cryptographic Protocols, Reader Compatibility, Key Management And System Certification. Security Risk Is Also Accelerating Product Upgrades. Publicly Reported Vulnerabilities In Older Hotel Key Card Systems And Legacy RFID Technologies Have Increased Customer Attention To Encrypted Chips, Random UID, Mutual Authentication And Diversified Key Management. At The Same Time, Mobile Credentials Can Reduce Physical Card Procurement And Lost-Card Risk, Which May Compress Some New Office Issuance Demand, But Physical Cards Remain Difficult To Fully Replace In Visitor, Hotel, Campus, Temporary Worker And Multi-System Compatibility Scenarios.

Demand Is Moving From "Opening Doors" To Secure, Manageable And Migratable Identity Credentials. Office And Commercial Buildings Are Increasingly Focused On Enterprise Identity Management, Visitor Management And IT Login Convergence. Hotels Emphasize Low Cost, High Turnover, Eco-Friendly Materials And Compatibility With Mainstream Lock Systems. Government And Critical Infrastructure Customers Prefer DESFire, PIV, PKI Or Customized Encrypted Credentials. Future Growth Will Mainly Come From Three Areas: Upgrade Of Legacy Low-Security Cards, Continuous Replacement Of RFID And Eco-Friendly Hotel Key Cards, And Campus Or Industrial Park One-Card Programs That Combine Access, Payment, Attendance, Visitor And Parking Functions Into One Card Or One Secure Credential Framework.
