Abstracts

The global Entry-class Single-Lens Reflex Camera market size is expected to reach \$ 1208 million by 2032, rising at a market growth of 3.0% CAGR during the forecast period (2026-2032).

In 2025, global Entry-class Single-Lens Reflex Camera production reached approximately 1.59 million units, with an average global market price of around US\$600 per unit.

The entry-class single-lens reflex camera (DSLR) is designed for beginner photographers and enthusiasts, combining interchangeable lenses, high-quality image sensors, and automated operation features while retaining an optical viewfinder and the flexibility of traditional DSLRs. Compared with mid-to-high-end DSLRs, entry-level DSLRs are more affordable, lightweight, and user-friendly, making them ideal for everyday photography, travel, and beginner photography education.

The upstream of entry-level DSLR cameras mainly includes suppliers of imaging sensors (CMOS/CCD), image processing chips, optical lenses, and body materials such as plastic and metal, with key suppliers including Sony, Panasonic, Zeiss, and Canon optics. Downstream channels cover retail stores, e-commerce platforms, photography training institutions, and end-users, with representative brands including Canon, Nikon, Pentax, and Sony.

The entry-level DSLR camera market remains stable but shows a slow decline, influenced by the rising capabilities of smartphone photography. However, there is still rigid demand among beginner photographers and educational sectors. Market trends indicate that manufacturers enhance competitiveness through lightweight design,

simplified operation, wireless connectivity (Wi-Fi/Bluetooth), and reasonable pricing. Drivers include the growth of photography enthusiasts, demand for online photography content, and continuous demand in education and training markets; adverse factors include the widespread adoption of high-resolution smartphone cameras, the rise of mirrorless alternatives, and consumption pressures due to global economic fluctuations.
