Abstracts

The global Environmentally Friendly Chemical Plasticizers market size is expected to reach \$ 662 million by 2032, rising at a market growth of 3.2% CAGR during the forecast period (2026-2032).

In 2025, global production of environmentally friendly chemical plasticizers reached 120,700 tons, with an average selling price of US\$4,250 per ton. The global annual production capacity of environmentally friendly chemical plasticizers is approximately 180,000 tons, with a gross profit margin of approximately 24.5%. Environmentally friendly chemical plasticizers generally refer to chemical plasticizers (sometimes also called depolymerizers, plasticizers, or degraders) used in material recycling, reprocessing, or waste treatment processes that are environmentally friendly and have high safety for human health and the ecosystem. Their core objective is to reduce the negative environmental impact of traditional chemical plasticizers while achieving effective depolymerization, separation, or degradation of specific materials. The upstream of the environmentally friendly chemical plasticizer industry chain includes bio-based raw materials and green solvent materials, additives and stabilizers, and wastewater treatment aids; the midstream consists of environmentally friendly chemical plasticizer manufacturers; and the downstream applications are mainly in the rubber and plastics processing industries.
