Enzymatic synthesis of cephalosporins refers to the process of using biological enzymes (such as acylases, transacetylases, etc.) as catalysts to convert substrates into cephalosporin antibiotics under controlled bioreaction conditions. This method typically offers advantages such as high efficiency, high selectivity, and environmental friendliness, as it allows reactions to occur under mild conditions and reduces by-products and environmental pollution compared to chemical synthesis. Enzymatic synthesis of cephalosporins is widely used in the pharmaceutical industry to enhance production efficiency and product quality.
