The global Enzymatic Textile Processing Chemicals market size is expected to reach $ 3426 million by 2032, rising at a market growth of 6.0% CAGR during the forecast period (2026-2032).

Enzymatic textile processing chemicals are enzyme preparations produced via microbial fermentation that possess specific catalytic functions, used to replace or reduce traditional harsh chemicals in textile wet processing, enabling low?temperature, water?efficient, and energy?efficient sustainable textile manufacturing. In 2025,global enzymatic textile processing chemicals production reached approximately 184,227 ton, with an average global market price of around USD 12,000 per ton. A factory gross profit of USD 3,000 per ton with 25% gross margin. A single line full machine capacity production is around 5,000 ton per line per year. The upstream is dependent on fermentation,microbial strains and purification chemicals. The downstream demand is concentrated in bio polishing, denin finishing and bio scouring. Cellulase used for cotton bio polishing, remove surface fuzz and enhaces fabric. smoothness. China market is driven by large enzyme consumption. Bangladesh and Vietnam market are driven by expanding textile and apparel manufacturing capacities.
