Abstracts

The global Enzyme Machines market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The enzyme machine uses a high borosilicate glass liner, which mixes fruits and vegetables with enzyme fermentation powder evenly and seals them for storage. Using NTC thermistors, the temperature and time of enzyme fermentation are kept constant, so that the fruits and vegetables in the liner react with the enzyme powder to fully ferment. Compared with traditional sealed fermentation, the time is shorter, the fermentation environment is more hygienic, and the breeding of harmful bacteria is effectively avoided.

This report studies the global Enzyme Machines production, demand, key manufacturers, and key regions.
