## Abstracts

According to our (Global Info Research) latest study, the global EO Residual Testing market size was valued at US\$ 2920 million in 2025 and is forecast to a readjusted size of US\$ 4734 million by 2032 with a CAGR of 7.2% during review period.

EO Residual Testing, also known as Ethylene Oxide Residual Testing, is a crucial analytical process used to detect and quantify the remaining amounts of ethylene oxide (EO) on or within a product following its exposure to ethylene oxide gas during sterilization or other related processes. Given that ethylene oxide is a potent and potentially hazardous chemical, this testing is essential in industries like medical device manufacturing, pharmaceuticals, and food processing to ensure product safety. It precisely determines the level of EO residuals, as excessive amounts can pose risks to human health, including irritation, sensitization, and potential carcinogenic effects.
