## Abstracts

According to our (Global Info Research) latest study, the global Epoprostenol Sodium Drugs market size was valued at USD 120.9 million in 2023 and is forecast to a readjusted size of USD 102.1 million by 2030 with a CAGR of -2.4% during review period.

Epoprostenol sodium directly simulates prostaglandin receptors in arterial vascular smooth muscle, thereby causing vasodilatation.

The Epoprostenol Sodium FDF (Finished Dosage Form) market is driven by the increasing prevalence of pulmonary arterial hypertension (PAH) and the growing demand for effective treatment options. Epoprostenol Sodium is a prostaglandin used to treat PAH, a progressive and life-threatening condition that affects the blood vessels in the lungs. The rise in risk factors such as obesity, cardiovascular diseases, and connective tissue disorders contributes to market growth. The development of stable and convenient FDF formulations of Epoprostenol Sodium has improved patient adherence and provided new treatment options. However, the market also faces challenges, including the high cost of Epoprostenol Sodium FDF and the need for personalized dosing and administration to achieve optimal therapeutic outcomes. Additionally, regulatory requirements and the competitive landscape can pose obstacles for manufacturers. To succeed, companies must focus on research and development to offer innovative and patient-friendly Epoprostenol Sodium FDF formulations, collaborate with healthcare providers to improve disease management, and address the challenges to meet the increasing demand for effective PAH treatment options.
