The global Epoxy Anti-Corrosion Coating market size is expected to reach \$ 15140 million by 2032, rising at a market growth of 5.4% CAGR during the forecast period (2026-2032).

Epoxy anti-corrosion coatings are functional coatings that use epoxy resin as the main film-forming substance, forming a dense three-dimensional network structure through cross-linking with a curing agent. Epoxy anti-corrosion coatings are currently the most widely used and technologically mature type of coating in the industrial anti-corrosion field. Using epoxy resin as a base material, they have become the preferred solution for protecting substrates such as steel and concrete from corrosion due to their excellent adhesion, chemical resistance, and mechanical strength.

The upstream raw materials for epoxy anti-corrosion coatings mainly include epoxy resin, rust-inhibiting pigments, coloring pigments, curing agents, solvents, and additives. Midstream production processes vary depending on product form and environmental requirements, but the core logic remains the same: physically mixing liquid epoxy resin with curing agents, pigments, and fillers to create a uniform coating. Downstream applications are mainly in marine engineering, infrastructure, petrochemicals, transportation, and energy industries.

In 2025, global sales of epoxy anti-corrosion coatings reached 3.3 million tons, with a production capacity of 4.3 million tons, an average selling price of US\$2,950 per ton, and an average gross profit margin of 24%-28%.
