According to our (Global Info Research) latest study, the global Epoxy Based Electrically Conductive Adhesives market size was valued at USD 892.1 million in 2023 and is forecast to a readjusted size of USD 1327.1 million by 2030 with a CAGR of 5.8% during review period.

Epoxy Based Electrically Conductive Adhesives is a material that consists of an epoxy resin mixed with a conductive material, and is used to form conductive joints that connect electronic components to PCBs (Printed Circuit Boards). Due to its physical characteristics, electrically conductive adhesives are used as alternatives to the conventional SMT (Surface Mount Technology) in many applications. It is a material that frequently consists of an epoxy resin mixed with a conductive filler. Higher conductivity can be achieved by using more filler, however, this reduces the strength of the bond due to less adhesive material.
