According to our (Global Info Research) latest study, the global Epoxy-based Intumescent Coating market size was valued at US\$ 746 million in 2024 and is forecast to a readjusted size of USD 920 million by 2031 with a CAGR of 3.2% during review period.

Epoxy-based intumescent coatings are advanced fire protection materials designed to safeguard structural steel in high-risk industrial environments. These coatings consist of a two-component epoxy system that, upon exposure to high temperatures, undergoes a chemical reaction causing the material to expand and form a thick, insulating char layer. This char layer acts as a thermal barrier, delaying heat transfer to the underlying steel and thereby maintaining its structural integrity during fire incidents. Epoxy-based intumescent coatings are particularly suited for harsh conditions found in sectors like oil and gas, petrochemical, and marine industries, offering robust resistance to corrosion, chemicals, and mechanical damage.
