Abstracts

According to our (Global Info Research) latest study, the global Epoxy Coated Steel Rebar market size was valued at US\$ 5916 million in 2025 and is forecast to a readjusted size of US\$ 7290 million by 2032 with a CAGR of 3.1% during review period.

Epoxy-coated steel rebar is a composite, corrosion-resistant reinforcement product created by applying a uniform protective epoxy resin film (typically 0.15-0.30 mm thick) onto the surface of ordinary carbon steel rebar using electrostatic powder spraying and high-temperature fusion-bonding processes.

Upstream inputs primarily include rebar, epoxy powder coatings, curing agents, pigments and fillers, additives, and sandblasting abrasives; the epoxy powder coating determines key performance characteristics such as adhesion, flexibility, impact resistance, cathodic disbondment resistance, and salt spray resistance. Downstream applications lie in reinforced concrete construction, specifically targeting environments with high corrosion risks, such as bridges, roads, parking structures, port and marine facilities, hydraulic structures, and municipal infrastructure.

In 2025, global sales volume is approximately 5.5 million tons, the average market price is around US\$1,045 per ton, and the gross profit margin for major manufacturers in the industry ranges from 15% to 20%.

Demand for epoxy-coated rebar stems primarily from the need for corrosion protection in reinforced concrete structures across sectors such as bridges, ports and terminals, marine facilities, parking garages, and municipal roads. Its core value lies in extending the service life of structures and reducing life-cycle maintenance costs at a relatively low

incremental cost. Industry growth is driven by infrastructure renewal, an increase in projects located in coastal and high-chloride environments, and heightened owner requirements for durability; however, it is also constrained by low-price competition from conventional black rebar, the susceptibility of the coating to damage during bending, transport, and installation, as well as rigorous demands for on-site repair and quality control. Overall, the market for epoxy-coated rebar is experiencing steady growth in infrastructure sectors across North America, the Middle East, coastal China, and Southeast Asia; future competition will shift from mere coating production capacity to factors such as coating quality, cutting and bending capabilities, certification systems, project delivery, and track record.
