Abstracts

The global Epoxy-functional Reactive Diluent market size is expected to reach $ 1449 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

In 2025, global sales volume of Epoxy-functional Reactive Diluent reached 344.68 k tons, with a global average market price of 2,950 US$/MT and an industry average gross margin of 28.3%.

The main upstream raw materials include epichlorohydrin, n-butanol, phenol, 1,4-butanediol, cresol, and others.

Major upstream suppliers include Olin, LOTTE Fine Chemical, BASF, Perstorp, Sasol, Dow, and others.

Major downstream customers include PPG, AkzoNobel, Jotun, Sherwin-Williams, Sika, H.B. Fuller, Gurit, Hexcel, and others.

Epoxy-functional Reactive Diluent is a type of functional chemical containing one or more epoxy functional groups that can participate in curing reactions. It can reduce the viscosity of epoxy resin systems while simultaneously taking part in crosslinking and curing reactions. Compared with conventional organic solvent-based diluents, Epoxy-functional Reactive Diluent generally does not volatilize substantially during curing but instead becomes incorporated into the final cured network structure, thereby improving processing and application flow properties while reducing volatile organic compound emissions. Epoxy-functional Reactive Diluent mainly includes monofunctional, difunctional, and multifunctional products. Common chemical structures include alkyl

glycidyl ethers, aromatic glycidyl ethers, glycol diglycidyl ethers, and polyol polyglycidyl ethers. Different products vary significantly in viscosity, epoxy equivalent weight, functionality, flexibility, heat resistance, chemical resistance, and reactivity. Epoxy-functional Reactive Diluent is typically used in combination with liquid epoxy resins to significantly reduce system viscosity, improve filler wetting, impregnation, leveling, infusion, and application performance, and, depending on its specific molecular structure, adjust the toughness, strength, crosslink density, and chemical resistance of the cured material. Epoxy-functional Reactive Diluent is widely used in coatings, adhesives and sealants, composites, electrical and electronic encapsulation, construction and flooring, automotive and transportation, wind turbine blades, marine applications, industrial casting, and other fields. Market demand is mainly influenced by epoxy resin consumption, the development of low-VOC and high-solids formulations, demand from wind energy and composite materials, upgrading of electrical and electronic materials, and demand for construction and industrial protective coatings.
