Abstracts

The global Epoxy Injection Grout for Concrete Repair market size is expected to reach \$ 431 million by 2032, rising at a market growth of 4.5% CAGR during the forecast period (2026-2032).

In 2025, global sales volume of epoxy injection grout for concrete repair was approximately 28,000 tons, with an average global market price of around USD 11/kg. The gross margin of major industry producers was approximately 30%-45%.

Epoxy injection grout for concrete repair is a high-performance injection material used for repairing concrete crack, hollow area, pore, and local defect. It is typically formulated with epoxy resin as the main component, together with curing agent, diluent, toughening agent, filler, and functional additive. Compared with cement-based injection material, epoxy injection grout offers advantages such as high bonding strength, good penetration, low curing shrinkage, excellent mechanical performance, and strong resistance to water and chemical corrosion. It can penetrate deep into fine crack and form a high-strength bonded structure, effectively restoring the structural integrity, impermeability, and durability of concrete.

Its upstream raw materials mainly include epoxy resin, amine or modified amine curing agent, reactive diluent, toughening agent, coupling agent, filler, thixotropic agent, accelerator, and packaging material. Downstream applications mainly cover building structure, transportation infrastructure project, underground and water conservancy engineering, industrial facility, and other concrete structure repair scenario. Driven by increasing demand for existing building reinforcement, bridge and tunnel maintenance, underground engineering anti-seepage repair, and industrial infrastructure renewal, epoxy injection grout for concrete repair has stable application value in structural

strengthening, crack sealing, and durability improvement.
