## Abstracts

The global Epoxy Potting Compounds market size is expected to reach \$ 977 million by 2032, rising at a market growth of 6.6% CAGR during the forecast period (2026-2032).

Epoxy potting compounds are thermosetting encapsulation materials used to fill, seal, and protect electronic and electrical assemblies against moisture, chemicals, dust, vibration, thermal cycling, and electrical stress. In 2025, Global epoxy potting compounds sales are estimated at 71,442 tons, with an average ex-works price of 8.38 US\$/kg.

The epoxy potting compound market is mainly driven by the increasing reliability requirements of electronic and electrical systems under harsher operating conditions. As automotive electrification, industrial automation, renewable energy conversion, and compact power electronics continue to expand, manufacturers need encapsulation materials that offer stronger insulation, moisture resistance, chemical resistance, mechanical protection, and thermal stability. At the same time, rising module power density and longer service-life expectations are pushing demand toward thermally conductive, flame-retardant, low-stress, and process-friendly epoxy systems, especially in sensors, transformers, inductive components, control units, and power modules.

This report studies the global Epoxy Potting Compounds production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Epoxy Potting Compounds and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Epoxy Potting Compounds that
