## Abstracts

The global Epoxy Resin for Prepreg market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

More commonly used in prepreg composite manufacturing are thermoset prepregs. The main resin matrix used is epoxy resin. Other thermoset resins are made into prepregs, including BMI and phenolic resins. With thermoset prepreg, the thermoset resin starts as a liquid and completely impregnates the fiber reinforcement. Excess resin is precisely removed from the reinforcement. At the same time, the epoxy undergoes partial curing, changing the resin's state from liquid to solid. This is called 'Phase B'. During the B stage, the resin is partially cured and usually tacky. When resin is raised to high temperatures, it will often return to a liquid state briefly before completely hardening. After curing, the thermoset resin in stage b is now fully cross-linked. The prepared composite materials have been widely used in aerospace, wind power generation, high-speed rail, automobiles, fishing gear, rowing and other fields. This report studies epoxy resins for prepregs.

This report studies the global Epoxy Resin for Prepreg production, demand, key manufacturers, and key regions.
