Epoxy resin putty is a paste-like mixture of synthetic resin emulsion, pigment, and filler as the main ingredients. Because of its weak strength, epoxy resin putty is often used as a finishing material or underlayment. It is mainly used as a base for finishing the surface of materials such as plywood, asbestos slate, gypsum board, mortar, and concrete with synthetic resin emulsion paint. On construction sites, it is often used to fill in nail holes in the joints between the nail holes and the joints between the gypsum boards before wallpaper is applied. When used as a finishing material, it is used in places where it is unlikely to be exposed to moisture, such as rainwater. It is often used for the purpose of repairing walls, especially in general households.
