Epoxy silane oligomer are a class of organosilicon compounds with epoxy and silane groups, and usually contain multiple repeating units in their molecular structure. Due to their unique chemical properties, these oligomers can react chemically with hydroxyl groups on the surface of various materials to form stable covalent bonds, thereby providing excellent bonding performance and durability. Epoxysilane oligomers can enhance the resistance of materials to environmental factors, such as water resistance, chemical resistance, and aging resistance. Due to the synergistic effect of their active silane and epoxy groups, these oligomers are of great value in the fields of biomaterials, optoelectronics, and fine chemicals.
