Abstracts

There are a variety of applications for epoxy-based materials on the market, including coatings, adhesives and the creation of composite materials. Those used for surface coatings are known for their good mechanical properties, electrical insulating properties, adhesion, and chemical- and heat-resistance. After you prepare and clean a surface, it becomes vulnerable to environmental contamination. When working with steel, for example, it takes as little as 30 minutes for flash rust to form. The longer you wait to apply an epoxy surface coating, the shorter the expected field longevity becomes. For this reason, manufacturers provide specific instructions regarding how quickly to apply the first coating and the ideal environmental conditions.

Scope of the Report:

This report focuses on the Epoxy Surface Coating in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The increasing demand for epoxy surface coating drives the market. Rapid industrialization is key driver to for epoxy surface coating market, this product is widely applied in many industries such as construction transportation. However, Stringent regulations, fluctuating raw material prices and environmental pollution are expected to be challenges.

The epoxy powdered coating has a wide scope of applications such as ceiling panels, display shelving, heaters, household goods, instrument casings, internal vehicle components, sports equipment, tubular steel furniture and wire work.
