## Abstracts

The global EPP and EPS Car Components market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

EPS can be used as a core for headrests or footrests, as a floor for the trunk, center console or in the form of padding. EPP is a new type of high-performance pressure-resistant cushioning insulation material with superior physical properties, stable chemical properties and easy recycling. It is currently mainly used in IT product packaging, communication equipment and automobiles. There is a big difference between EPP and EPS materials: EPS material achieves the anti-compression and cushioning effect by destroying its own structure, while EPP material achieves the anti-compression and cushioning effect by shrinking and expanding the material, absorbing and releasing energy.

This report studies the global EPP and EPS Car Components production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for EPP and EPS Car Components, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
