According to our (Global Info Research) latest study, the global EPS and XPS Thermal Insulation Board market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

EPS and XPS thermal insulation boards are relatively common in building insulation materials. They are both foam insulation boards made of polystyrene as the main raw material, and have different manufacturing industries, characteristics and uses.

The EPS thermal insulation board is a foam plastic insulation material made from EPS particles. It has the characteristics of low thermal conductivity, good thermal insulation performance, moisture-proof and waterproof performance, pressure resistance and corrosion resistance, and easy construction. The XPS thermal insulation board is a foamed plastic insulation material made of XPS granules. It has the characteristics of low thermal conductivity, good thermal insulation performance, strong compression resistance, good corrosion resistance, safety and environmental protection. EPS and XPS thermal insulation boards are good insulation materials and should be selected and used according to specific conditions.
