According to our (Global Info Research) latest study, the global Equal Strength Anchor Rod market size was valued at US\$ 773 million in 2025 and is forecast to a readjusted size of US\$ 1119 million by 2032 with a CAGR of 5.4% during review period.

Equal strength anchor rod refers to a mining and geotechnical support anchor rod with a relatively consistent bearing capacity throughout the entire length or main stress section of the rod body. It is usually made of threaded steel, precision rolled threaded steel or high-strength steel bars. Typical forms include full threaded steel equal strength anchor rod, right-handed equal strength threaded steel anchor rod, resin anchor and full length grouting equal strength anchor rod. Its core function is to connect broken or layered rock masses into a whole through resin anchoring agents, cement slurry, or mechanical anchoring methods, improve the tensile, shear, and deformation resistance of the surrounding rock, and reduce the risks of roof subsidence, fragmentation, collapse, and rock instability. In 2025, global Equal Strength Anchor Rod production reached approximately 95.63 M Units, with an average global market price of around US\$ 7.86 per Unit. The annual production capacity of strong anchor rods is 130 M Units, with a gross profit margin of about 25%.

The upstream of equal strength anchor rods mainly includes threaded steel, precision rolled threaded steel, high-strength alloy steel, round steel, steel billets, trays, nuts, washers, resin anchoring agents, cement slurry materials, anti-corrosion coatings, hot-dip galvanized materials, epoxy coatings, rolling equipment, wire turning equipment, heat treatment equipment, and tensile testing equipment.

The downstream mainly includes coal mines, metal mines, non-metal mines,

underground mines, railway tunnels, highway tunnels, subways, municipal underground spaces, hydropower chambers, slope treatment, foundation pit support, and geological hazard control projects. The customer types include mining enterprises, tunnel excavation construction teams, tunnel construction units, geotechnical engineering companies, infrastructure general contractors, anchoring and support material distributors, and mining equipment suppliers.

Steel raw materials account for about 58% to 72%, rolling, straightening, cutting, threading or rolling processing account for about 8% to 14%, pallets, nuts, washers and other accessories account for about 5% to 10%, heat treatment and surface treatment account for about 3% to 8%, testing, tensile testing and quality control account for about 2% to 5%, labor, energy and equipment depreciation account for about 4% to 8%, packaging, warehousing and transportation account for about 4% to 8%, and wear and tear and after-sales warranty account for about 1% to 3%.

Equal strength anchor rods belong to the basic consumable materials in mining roadway support and underground engineering rock reinforcement. The demand mainly comes from coal mining, deep mining of metal mines, tunnel engineering, slope treatment, subway and urban underground space, hydropower tunnels, and foundation pit support. With the increase of mining depth, the rise of surrounding rock stress in tunnels, and the tightening of safety supervision, traditional low-strength support materials are upgrading to high-strength, high elongation, full-length anchoring, anti-corrosion coating, and resin rapid anchoring systems. Due to mature processing, high installation efficiency, controllable cost, and reliable anchoring, high-strength threaded steel anchor rods will still be widely used. The follow-up industry opportunities are mainly reflected in deep mining safety support, intelligent excavation matching, fast resin anchoring, high prestress support, anti-corrosion and durable anchor rods, export certified products, and integrated support systems; The main challenges include fluctuations in rebar prices, homogenization of low-end products, fluctuations in mining investment cycles, increased customer demands for safety certification and batch consistency, as well as competition from alternative or complementary products such as pipe seam anchor rods, hollow grouting anchor rods, self drilling anchor rods, and anchor cables.
