According to our (Global Info Research) latest study, the global Equatorial Mount Telescope market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

An equatorial mount telescope is a special telescope designed for astronomical observation and photography. It is a telescope with an equatorial mount. Its mount is designed with precise polar and declination axes. This mount is designed to allow the telescope to easily track the movement of celestial bodies. Compared with telescopes with other mounting methods (such as horizon mounting), equatorial mounts are more suitable for astronomical observations, especially for long-term tracking of celestial bodies in the night sky.
