Equine imaging services refer to professional services that use various imaging technologies to inspect, record and evaluate horses. These imaging technologies include but are not limited to X-rays, ultrasound, magnetic resonance imaging (MRI), computed tomography (CT), etc., which are used to observe the bones, muscles, internal organs and other structures of horses, and provide important basis for health diagnosis, breeding evaluation, sports performance analysis and other aspects of horses. Equine imaging services are relatively mature in some developed countries, with professional imaging equipment and technicians providing high-quality services for horses. The equestrian sports industry and horse breeding industry in these countries are relatively developed, and they attach great importance to horse health, which has promoted the development of horse imaging services. However, in some developing countries, horse imaging services are still in their infancy, with relatively scarce equipment, insufficient number of technicians, and limited service coverage.
