The global Equipment Status Management System market size is expected to reach \$ 7173 million by 2032, rising at a market growth of 7.8% CAGR during the forecast period (2026-2032).

Equipment status management system is a technology solution designed to monitor, track, and manage the operational status of equipment in real-time. It is commonly used in industrial, manufacturing, healthcare, and other sectors where the performance and uptime of critical equipment significantly impact productivity and efficiency.

Driving factors in the equipment status management system market include growing pressure on factories and infrastructure operators to increase uptime and OEE (Overall Equipment Effectiveness), which pushes them to gain real-time visibility into machine health, utilization and bottlenecks instead of relying on manual logs and periodic inspections. The spread of Industry 4.0, IoT sensors and connected PLC/SCADA systems makes it technically and economically feasible to collect status data from both new and legacy equipment, creating strong pull for software platforms that can aggregate and visualize this information. At the same time, rising labor costs and skill shortages in maintenance teams encourage adoption of systems that support condition-based and predictive maintenance, allowing fewer technicians to manage more assets. This report studies the global Equipment Status Management System demand, key companies, and key regions.

This report is a detailed and comprehensive analysis of the world market for Equipment Status Management System, and provides market size (US\$ million) and Year-over-Year (YoY) growth, considering 2025 as the base year.
