Abstracts

Er YAG Laser is a solid-state laser that utilizes erbium-doped yttrium aluminum garnet crystal as the active medium. This kind of laser usually works in the mid-infrared band, with a wavelength of about 2940 nanometers, and is widely used in the medical and cosmetic fields, dental and ophthalmic surgeries. The short pulse and high energy characteristics of the Er YAG Laser make it suitable for fine cutting and tissue removal while reducing damage to surrounding tissue. In the field of medical beauty, it is often used for skin surface treatment, such as pigment spot removal, scar treatment and skin regeneration. In the dental field, Er YAG Laser can be used for enamel removal, root canal treatment and periodontal disease treatment. In ophthalmic surgery, it is used for retinal surgery and cataract surgery, etc.

According to our (Global Info Research) latest study, the global Er YAG Laser market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
