Abstracts

The global Erbium Dental Lasers market size is expected to reach \$ 67 million by 2029, rising at a market growth of 6.1% CAGR during the forecast period (2023-2029).

Erbium lasers are built with two different crystals, the Er:YAG (yttrium aluminum garnet crystal) and Er,Cr:YSGG (chromium sensitized yttrium scandium gallium garnet crystal). They do have different wavelengths, Er:YAG has 2940 nm and Er,Cr:YSGG has 2780 nm. Though similar, there is a significant water absorption difference between these two wavelengths. Er:YAG wavelength is at the peak of water absorption in the infrared spectrum whereas the Er,Cr:YSGG exhibits approximately one third less absorption. The Er,Cr:YSGG has also been shown to have significantly deeper thermal penetration in tooth structure as well. In general terms they behave similarly and will simply be referred to as erbium lasers.

This report studies the global Erbium Dental Lasers production, demand, key manufacturers, and key regions.
