According to our (Global Info Research) latest study, the global Ergonomic Assessment Software market size was valued at US\$ 313 million in 2025 and is forecast to a readjusted size of US\$ 458 million by 2032 with a CAGR of 5.7% during review period.

Ergonomic assessment software refers to software tools used to assess the ergonomic impact of work environments, tools, equipment or tasks. This type of software is designed to help identify and reduce the potential harm caused by biomechanical loads, poor posture, repetitive motions, etc. in the workplace, thereby improving productivity and employee health.

The ergonomic assessment software industry is undergoing transformative growth and innovation, driven by advancements in AI, IoT integration, and hybrid work demands. Key trends include AI-driven real-time analysis, where machine learning algorithms analyze posture, movement, and workstation setups using webcam or sensor data to provide instant feedback and personalized recommendations, reducing manual labor and improving accuracy by up to 50%. Cloud-based and mobile-first solutions dominate deployment, allowing remote assessments for hybrid workforces. IoT-connected wearables are increasingly used to track metrics like repetitive motion, vibration exposure, and muscle fatigue, with ViAct's AI-powered system combining computer vision and IoT to monitor tool handling and posture in manufacturing, reducing musculoskeletal disorder (MSD) risks by 50%.
