Erosion Repair and Shoreline Restoration is a multi-disciplinary, science-based practice that integrates fluvial/coastal geomorphology, hydraulic engineering, aquatic/terrestrial ecology, hydrology, and climate adaptation to address two core, interconnected objectives: Erosion Repair and Shoreline Restoration.

This practice applies to all shoreline types, including coastal (ocean, estuary, bay), inland fluvial (river, stream, creek), and lacustrine (lake, reservoir, pond) systems. It is distinct from temporary erosion control (e.g., sandbags, silt fencing) by its focus on permanent, sustainable solutions, and from purely structural flood protection by its integration of ecological co-benefits and natural system function.
