Enterprise resource planning (ERP) is a type of software system that helps organizations automate and manage core business processes for optimal performance. ERP software coordinates the flow of data between a company's business processes, providing a single source of truth and streamlining operations across the enterprise. It's capable of linking a company's financials, supply chain, operations, commerce, reporting, manufacturing, and human resources activities on one platform. Discrete manufacturing involves creating finished goods by assembling parts you can easily see, count, or touch. Manufacturers using this production process typically assemble parts to create subsystems or finished products. The assembling and production processes are part of discrete manufacturing. In discrete manufacturing, several workstations throughout the production line produce distinct components, parts, materials, or subassemblies, to be put together at the end of the production cycle to create the final product. This report studies ERP Software for discrete manufacturing.
