The global Erythrocyte Life Tester market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The red blood cell life tester is the first instrument in the world to measure the life of red blood cells by measuring the concentration of carbon monoxide in the exhaled breath. It can measure the life of red blood cells only by exhaling. The detection time is shortened from one month to half an hour, and there is no radioactivity. It will change the current situation that it is difficult to directly measure the lifespan of red blood cells.
