## Abstracts

According to our (Global Info Research) latest study, the global Escalator Handrails Disinfection Device market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

An Escalator Handrails Disinfection Device is a system or apparatus designed to disinfect or sanitize the handrails of escalators and moving walkways. The primary purpose of this device is to help maintain cleanliness and hygiene in public places where handrails can harbor germs and bacteria due to frequent contact.

Many escalator handrails disinfection devices use UV-C (ultraviolet-C) light technology. UV-C light is known for its germicidal properties and can effectively kill or inactivate microorganisms, including bacteria and viruses. The device can be mounted onto escalators or integrated directly into the handrail mechanism. It may run continuously or be activated periodically. The disinfection process typically occurs without direct contact with the handrail, ensuring user safety and convenience.
