According to our (Global Info Research) latest study, the global ESD Conductive Wheel market size was valued at US\$ 879 million in 2024 and is forecast to a readjusted size of USD 1193 million by 2031 with a CAGR of 3.7% during review period.

ESD (Electrostatic Discharge) Conductive Wheel can be explained in English as a wheel that is specifically designed to have conductive properties, allowing it to dissipate static electricity. This is particularly important in environments where electrostatic discharge can be harmful or damaging, such as in electronic manufacturing or handling sensitive components. The conductivity of the wheel helps to prevent the accumulation of static charges, which can cause sparks that may damage equipment or ignite flammable materials. By using an ESD conductive wheel, businesses and individuals can help to ensure the safety and integrity of electronic devices and components during transportation, storage, and handling processes.
