Abstracts

The global ESD Test System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The ESD test system is a device used to test the anti-interference ability and tolerance of electronic equipment in an electrostatic discharge (ESD) environment. ESD is a sudden discharge caused by the accumulation of static electricity, which may cause interference, damage or even destruction to electronic equipment. The ESD test system simulates this electrostatic discharge phenomenon to evaluate the performance of the equipment in the ESD environment, so as to ensure that the equipment will not be disturbed by ESD in actual use.

This report studies the global ESD Test System production, demand, key manufacturers, and key regions.
