According to our (Global Info Research) latest study, the global Esomeprazole Capsule market size was valued at US\$ 2727 million in 2025 and is forecast to a readjusted size of US\$ 4041 million by 2032 with a CAGR of 5.8% during review period.

In 2025, global Esomeprazole Capsule production reached approximately 6309.52 million units, with an average global market price of around US\$0.42 per capsule.

The gross profit margin of major companies in the industry is between 55%–75%.

In 2025, the global production capacity of esomeprazole capsules was approximately 8412.69 million units.

Esomeprazole Capsules are oral proton pump inhibitor formulations used to suppress gastric acid secretion by inhibiting the H⁺/K⁺-ATPase enzyme in gastric parietal cells. They are widely prescribed for the treatment of gastroesophageal reflux disease, peptic ulcer disease, erosive esophagitis, and Helicobacter pylori eradication therapy.

The industrial chain of Esomeprazole Capsules includes upstream active pharmaceutical ingredients, excipients, capsule shells, and packaging materials. The midstream focuses on formulation development, granulation, encapsulation, coating, and quality control. Downstream applications cover hospital prescriptions, retail pharmacies, and outpatient treatment settings, supported by regulatory compliance, distribution, and pharmacovigilance services.

The esomeprazole capsule market is supported by stable demand for acid-related

disorder treatments. As a widely used proton pump inhibitor, esomeprazole remains a first-line therapy for GERD and peptic ulcer disease. Growth is driven by aging populations, increasing gastrointestinal disease prevalence, and continued use of generic formulations. Price competition is intense in mature markets, while volume growth remains stable. Overall, the market is expected to grow moderately with demand centered on large-volume, cost-effective generic production.
