An esophageal balloon catheter is a medical device used to diagnose and treat conditions within the esophagus. It consists of a flexible tube with an inflatable balloon at one end, which can be expanded to dilate narrowed areas of the esophagus or to apply pressure to control bleeding. These catheters are often employed in procedures such as esophageal dilation for strictures or in managing esophageal varices. The balloon is carefully inflated to the required size to ensure effective treatment while minimizing discomfort and risk to the patient. Esophageal balloon catheters are essential tools in gastroenterology, providing a minimally invasive solution for various esophageal disorders.
