Esophageal video capsule endoscopy is a new type of digestive system inspection method, by taking a smart capsule with a camera and signal transmission device to observe the internal lesions of the digestive tract. The specific process is that after the patient swallows the capsule endoscope, the capsule can move in the esophagus, stomach, intestines and other parts and take images, and at the same time transmit the images to the recorder outside the patient's body for storage and analysis. This examination method has the advantages of being non-invasive, painless, and easy to operate, and is suitable for detecting early gastrointestinal tumors, inflammation and other diseases.
