Abstracts

Chicken essence is made of monosodium glutamate, edible salt, chicken/chicken bone powder or its concentrated extract, taste nucleotide disodium and other auxiliary materials, with or without adding flavoring agents such as spices and/or food flavors after mixing. Dried and processed, it is a compound seasoning with chicken umami taste and aroma, and its freshness is more than twice that of sodium glutamate. Since chicken essence contains umami nucleotides as a freshness enhancer, it has a freshness effect, and its purity is lower than that of monosodium glutamate.
