Abstracts

The global Esters of Acrylic Acid market size is expected to reach \$ 13604 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

Esters of acrylic acid are monomeric compounds formed by the esterification of acrylic acid with various alcohols. These reactive monomers are produced via continuous esterification in large-scale industrial plants. They undergo free-radical polymerization to produce acrylic polymers and copolymers, imparting flexibility, weatherability, adhesion, UV resistance, and water resistance to the final polymer matrix. In 2025, global esters of acrylic acid production reached approximately 5,672K ton, with an average global market price of around USD 1,700 per ton. A factory gross profit of USD 476 per ton with 28% gross margin. A single line full machine capacity production is around 40K ton per line per year. The upstream is dependent on propylene, methanol and ethanol. The downstream demand is concentrated in paints and coatings, adhesives and sealants and textiles. n-Butyl Acrylate (BA) use in waterborne exterior paint, primary binder providing flexibility for expansion/contraction with temperature changes and prevents cracking on exterior walls. China and India market are driven by large producer and consumer. South Korea market maintain strong export position.
