An electronic toll collection (ETC) system is a sophisticated application that includes a group of technologies to provide automated non-stop cashless payment of road toll at toll plazas or toll collection center.

Scope of the Report:

This report focuses on the ETC Systems in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The system works with various technology-enabled products such as transponders, antennas, sensors, and wireless communication devices equipped with RFID technology. The vehicles are charged toll, as they drive through the toll gates, by means of various wireless communication devices installed at toll gates and system devices mounted on the vehicle. The vehicle do not have to stop to pay the toll. The ETC system helps to reduce traffic congestion on highways and the traffic management process is also streamlined.

The worldwide market for ETC Systems is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
