Abstracts

The global ETFE Coated Rubber Stoppers market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The rubber stopper portion of the closure is typically made from a high-quality elastomer material that is compatible with the pharmaceutical product and has excellent sealing properties. It forms a tight and secure seal when inserted into the container, preventing leakage and maintaining the integrity of the packaged product.

The ETFE coating on the rubber stopper offers several advantages:

Chemical resistance: ETFE is known for its exceptional chemical resistance, withstanding a wide range of chemicals and solvents. The ETFE coating ensures compatibility with various drugs or chemicals, minimizing the risk of interactions between the rubber material and the pharmaceutical product.

Temperature resistance: ETFE has excellent temperature resistance, allowing the coated stopper to withstand high and low temperatures without degradation or melting. This makes ETFE coated rubber stoppers suitable for applications that require sterilization processes or extreme temperature conditions.

Non-stick properties: ETFE exhibits non-stick properties, reducing the adhesion of substances to the stopper's surface. This helps in preventing the sticking of powders, residues, or other substances that may compromise the integrity of the pharmaceutical product.

Enhanced durability: The ETFE coating provides a protective layer that improves the

durability and longevity of the rubber stopper. It helps resist wear, abrasion, and degradation, ensuring the stopper remains intact and functional throughout its use.

ETFE coated rubber stoppers are commonly used in pharmaceutical applications that require chemical resistance, temperature resistance, non-stick properties, and durability. They are utilized in various packaging formats, such as vials, bottles, and containers, to ensure the quality, safety, and stability of the pharmaceutical product.

ETFE coated rubber stoppers are specialized closures used in pharmaceutical packaging. These stoppers consist of a rubber stopper that is coated with a layer of ethylene tetrafluoroethylene (ETFE) material. The ETFE coating provides additional protection and functionality to the rubber stopper.
