Abstracts

ETFE Monofilament is a monofilament made of fusible fluororesin ETFE (ethylene-tetrafluoroethylene copolymer). ETFE monofilament has many excellent properties, such as its melting point between 256 and 280°C, crystallinity of up to 50% to 60%, and excellent mechanical properties. Its impact resistance, hardness, cold flow resistance and creep resistance are better than PTFE and FEP. In addition, ETFE monofilament also has good chemical resistance, high operating temperature, low friction coefficient and excellent radiation resistance. Therefore, ETFE monofilaments are widely used in many fields such as medical, chemical, fishery, electronics, aerospace, etc., especially in application scenarios that require high chemical resistance, high temperature resistance, and radiation resistance. For example, it can be used in the manufacture of products such as components around car windows and filters for high-viscosity liquids.

According to our (Global Info Research) latest study, the global ETFE Monofilament market size was valued at US\$ 220 million in 2023 and is forecast to a readjusted size of USD 343 million by 2030 with a CAGR of 6.5% during review period.
