Abstracts

The global Ethyl 2-Cyanoacrylate market size is expected to reach \$ 1059 million by 2032, rising at a market growth of 3.0% CAGR during the forecast period (2026-2032).

In 2025, global production of ethyl 2-cyanoacrylate reached 541,700 tons, with an average selling price of US\$1,500 per ton. Global annual production capacity for ethyl 2-cyanoacrylate was approximately 700,000 tons, with a gross profit margin of approximately 21.5%. Ethyl 2-cyanoacrylate is an organic compound with the chemical formula $C_8H_7NO_2$. It is an acrylate monomer, containing a cyano group (-CN) and an ethyl ester group (-COOCH₂CH₃) in its molecular structure, belonging to the α -cyanoacrylate family. This compound usually exists in liquid form and is highly reactive, readily undergoing anionic polymerization in humid, moist, or slightly alkaline environments to rapidly form high-molecular-weight polymers. This characteristic makes it a core component of many instant adhesives (such as the common 'super glue' or '502 glue'), enabling strong adhesion between materials in a short time. Upstream components of ethyl 2-cyanoacrylate include ethyl cyanoacrylate, formaldehyde, and sulfuric acid. The midstream is a manufacturer of ethyl 2-cyanoacrylate, while the downstream applications are mainly in industries such as manufacturing, pharmaceuticals, and electronics.

Ethyl 2-cyanoacrylate (ethyl cyanoacrylate), as a fast-drying instant adhesive monomer, exhibits a market characterized by 'downstream-driven growth and significant regional differences.' Its main demand comes from fields such as electronic and electrical assembly, medical and repair adhesives, industrial repair, and emergency packaging. With the increasing demand for automation and precision assembly in manufacturing, adhesives are facing rising requirements for bond strength, curing speed, and environmental resistance, thus driving the increased production of high-purity, low-

volatile/low-odor, and stable curing systems. Meanwhile, the stability of raw materials and synthesis processes affects costs and supply rhythms, and industry competition is increasingly focused on product quality consistency, compliance and safety performance (such as irritant control, storage and transportation, and MSDS requirements), and customer certification efficiency. Overall, the market remains in a phase of steady growth and structural upgrading, but companies need to focus on addressing fluctuations in raw material prices and changes in regulatory compliance barriers.

This report studies the global Ethyl 2-Cyanoacrylate production, demand, key manufacturers, and key regions.
