Abstracts

The global Ethyl 4-nitrobenzoate market size is expected to reach \$ 48.53 million by 2032, rising at a market growth of 4.2% CAGR during the forecast period (2026-2032).

In 2025, the global production of ethyl 4-nitrobenzoate was approximately 4650 tons, with an average selling price of around US\$7600 per ton. The production capacity in 2025 was 5700 tons, with an average gross profit margin of approximately 15-25%. Ethyl 4-nitrobenzoate is an organic compound, usually appearing as colorless to light yellow crystals or powder. It is an important intermediate in organic synthesis, particularly used in the production of local anesthetics, antitussives, and dyes. It is synthesized by the esterification of p-nitrobenzoic acid with ethanol, and is readily soluble in ethanol but insoluble in water.

The core upstream raw materials for ethyl 4-nitrobenzoate are p-nitrobenzoic acid and ethanol, mainly synthesized through esterification reactions. Its downstream applications are highly concentrated, primarily as a key pharmaceutical intermediate used in the synthesis of the local anesthetic procaine hydrochloride; it is also used in small quantities in organic synthesis and the dye industry as a specialized building block.
