Abstracts

The global Ethyl Butyrate market size is expected to reach \$ 16.79 million by 2032, rising at a market growth of 4.0% CAGR during the forecast period (2026-2032).

Ethyl butyrate is a colorless, transparent liquid with a strong pineapple or pear aroma, found in many fruits. It is a short-chain fatty acid ester, primarily used as a flavor enhancer in food, an organic solvent, and an extractant; it is unstable under alkaline conditions.

The core upstream raw materials are butyric acid and ethanol, which undergo esterification under the action of a catalyst. Downstream applications primarily cover the food and beverage sector (especially orange juice and tropical fruit flavor replication). Global sales are projected to reach approximately 5,000 tons in 2025, with an average selling price of US\$2,486 per ton. The industry's gross profit margin is between 20% and 30%.

The beverage and low-sugar formulation market has reached new heights in its pursuit of 'freshness' and 'tropical fruit aromas,' making ethyl butyrate (EB) a top choice for enhancing product sensory premium due to its excellent aroma threshold (often used to enhance citrus and tropical flavors). As consumers increasingly favor 'all-natural' labels, downstream perfumers are more inclined to purchase EB with 100% natural certification, driving the entire industry chain towards higher transparency and traceability. In terms of technological advancements, continuous innovation in catalytic conversion and fermentation processes has significantly improved production efficiency and gradually optimized cost structures, providing technological support for market expansion.

This report studies the global Ethyl Butyrate production, demand, key manufacturers, and key regions.
