According to our (Global Info Research) latest study, the global Ethyl Carbazate market size was valued at US\$ 18.11 million in 2025 and is forecast to a readjusted size of US\$ 24.17 million by 2032 with a CAGR of 4.2% during review period.

In 2025, global Ethyl Carbazate sales volume is estimated at approximately 1,100 tons, with an average global market price of around USD 16/kg. The gross margin of major manufacturers in the industry is estimated to range from 5% to 38%.

Ethyl Carbazate is an important hydrazine-based fine chemical intermediate, with the CAS number 4114-31-2. It is typically a white to off-white crystalline solid and has dual reactivity derived from both ester and hydrazide functional groups, enabling it to participate in condensation, substitution, acylation, and heterocycle-forming reactions. The product is mainly used in medicine, pesticide, and fine chemical synthesis routes, often serving as a basic intermediate for introducing hydrazine, hydrazide, and nitrogen-containing heterocyclic structures. Its downstream applications require certain standards for purity, impurity control, appearance, and batch-to-batch consistency.

The upstream raw materials mainly include hydrazine hydrate, ethyl chloroformate, diethyl carbonate, solvents, catalysts, and refining auxiliaries. In the midstream segment, fine chemical manufacturers produce industrial-grade or medicine-grade products through hydrazinolysis, separation, crystallization, drying, and purification processes. Downstream, Ethyl Carbazate is mainly used in medicine intermediates, pesticide intermediates, and other fine chemical fields.
