According to our (Global Info Research) latest study, the global Ethyl Chloride market size was valued at US\$ 643 million in 2024 and is forecast to a readjusted size of USD 941 million by 2031 with a CAGR of 6.4% during review period.

Ethyl chloride, also known as chloroethane (C_2H_5Cl), is a colorless, flammable gas or volatile liquid with a sweet, ether-like odor. It is primarily used as a chemical intermediate in the production of tetraethyl lead, though this application has declined due to environmental regulations. Ethyl chloride is also used as a local anesthetic in minor surgical procedures, particularly as a topical refrigerant to numb the skin before injections or small incisions. Its features include high volatility, low boiling point, and ease of liquefaction under moderate pressure, making it suitable for aerosol sprays and refrigeration applications. Additionally, ethyl chloride is used in the manufacture of other chemicals and as a solvent for fats, oils, and waxes in industrial settings. Despite its usefulness, its flammability and potential health hazards necessitate careful handling and storage.
