## Abstracts

According to our (Global Info Research) latest study, the global Ethyl Protocatechuate market size was valued at US\$ 10.62 million in 2025 and is forecast to a readjusted size of US\$ 18.71 million by 2032 with a CAGR of 8.4% during review period.

In 2025, global sales volume of Ethyl Protocatechuate was approximately 55.8 tons, with an average global market price of around USD 185/kg. The gross margin of major producers was generally in the range of 30%–50%. Ethyl Protocatechuate is a phenolic acid ester fine chemical, also known as ethyl 3,4-dihydroxybenzoate, with CAS No. 3943-89-3. Its molecular structure contains both catechol hydroxyl groups and an ethyl ester group, giving it certain antioxidant activity and structural modification value. The product is typically produced through esterification of protocatechuic acid, synthesis from related aromatic intermediates, or biomanufacturing routes, and is mainly used in pharmaceutical intermediates, food and food additives, cosmetics, and other related fields. Among these, pharmaceutical intermediates and functional fine chemicals represent the more important commercial application directions, while applications in food and cosmetics are mainly focused on antioxidant properties, natural-source positioning, and functional bioactivity development. From the perspective of regional competition, the supply of Ethyl Protocatechuate is mainly concentrated in China and India, where fine chemical and pharmaceutical intermediate manufacturing capabilities are relatively strong. Chinese companies generally rely on phenolic acid compound platforms, biomanufacturing technologies, and high-purity fine chemical production capabilities to supply Ethyl Protocatechuate, showing certain advantages in purity control, green processing, and the development of food and cosmetic functional ingredients. Indian companies, by contrast, mainly leverage their pharmaceutical intermediate and custom synthesis systems, supplying Ethyl Protocatechuate as an

Erlotinib-related pharmaceutical intermediate or as a small-batch fine chemical. Given the relatively limited overall demand for this product, the industry has not yet formed a highly concentrated leading-player structure. In the future, high-quality orders are expected to increasingly flow toward companies with stable quality control, process scale-up capabilities, compliance documentation support, and customer qualification capabilities; however, the overall market is expected to remain a fragmented competitive landscape typical of small-volume phenolic acid ester fine chemicals.
