## Abstracts

According to our (Global Info Research) latest study, the global Ethylene Octene Copolymer market size was valued at USD 908.2 million in 2023 and is forecast to a readjusted size of USD 1522 million by 2030 with a CAGR of 7.7% during review period.

EOC is an ethylene based elastomer, so it brings an excellent compatibility with polyolefins, such as polyethylene and PP. The presence of the octene monomer in EOC causes a lower level of crystallinity and a higher flexibility in the copolymer. EOC can be considered as an elastomeric polymer, and usually the octene content in the copolymer varies under 20?wt. %. Blends of PP/EOC may provide enhanced impact properties and can be used, for example, in extruded or moulded automotive exterior and interior parts, housing appliances, and other low-temperature applications. Pelletized EOC exhibits easy handling, mixing, and processability. Based on these properties, EOC is currently being used as an impact modifier of PP to replace ethylene propylene rubber (EPR) and ethylene propylene diene rubber (EPDM).

Major companies in the industry include Dow, SABIC SK Nexlene Company (SSNC), LG Chemical, etc., accounting for 55.29%, 17.83% and 7.57% of their revenues respectively in 2019. By region, China has the highest share of value, reaching 35.6 percent in 2019.
